ISPM 15

FEFPEB report status 2017 ISPM 15

Conclusions and Recommendations

The actual situation status ISPM 15 in the European Union in 10 Member States.

More countries are expected to follow.

The report illustrates the wide variety in terms of implementation of the FAO Guideline ISPM 15.

It remains a challenge for the wooden pallet and packaging industry to cope with all the differences.

Since the introduction of ISPM 15 FEFPEB advocates the importance of harmonization of ISPM 15 rules and its implementation and this has been shared with the FAO, the NPPO's, the European Commission (DG SANTE), the Standing Committee on Plant Health and our global industry partners (Global Forum Wooden Pallet and Packaging Industry)

The actual situation 2017 underlines our position regarding ISPM 15:

- Lack of harmonization of the national wood marking schemes creates confusion between countries all around the world
- Repair rules are not transparent and multi-interpretable
- The multiple marking rule should be clear and the amount of markings must be limited
- Stronger (legal) actions against mark falsifications and proper policing of trade flows by the national authorities required
